                                                                                                                                                                                                                                                                                     The invention relates to a movel composition comprising a substance that reductes the status of a protein 12.P2A3. The composition of the invention has eyected in and immunosimulate activity, and is useful as a vaccine. The 12.P2A3 proteins and polymodecides are useful for the humore proteins activity and is useful as a first in the characterising cytogenetic abnormalities of this immune response. The polymodecides are useful for characterising cytogenetic abnormalities in the chromosomal region that encodes 12.P2A3 tat may contribute to malignant phencype, and in assessing the status of 121P2A3 gene products in normal versus cancerous tissues. The proteins are useful for generating and characterising domain, specific antibodies, for identifying agents or cellular factors that bind to 121P2A3 or a particular structure domain, and in various therapeutic and diagnostic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               contexts, including cancer vaccines. The antibodies or T cells leactive with the product are useful in passive or active immunisation, and in in author methodologies for the management of cancer. The sequences shown in ABE93646 - ARP96595 represent peptides from the 121P2A3 variants of
New composition comprising a substance that modulates the status of 121P2A polypoptides, useful for eliciting humbral or cellular immune responses or in assessing the status of 121P2Al gene products in normal versus cancerous tissues.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ..

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          9 80 The present invention describes in includency of propassing a periode of tai and a carrier [1b] derived from protein D of Hammore lar influence of its fragment. Also described are [1] a vaccine comprising [1] and an excipient [2] preparation of [3], compilating conjugation a peptide comprising [3] with an excipient, [6] has expositative, and [3] preparation of a vaccine of [3], and [3] exert, noctrople, neuroprotective and proteins and arrival and [3], and the vaccine free useful for the manufacture of a redistrict for the vaccine are useful for the manufacture of a redistrict for the vaccine are useful for the manufacture of a redistrict for disease such as cancer. Alzherner's disease controllery to a patient. Unlike prior art immunogens, [1] reduces him revels of antipeptide carrier. The prosess while inducing a rederive lambure and a research a sequence and international properties adainst the carrier. The prosess such sequence, which on the community of the
                                                                                                                                                           immunagens and vaccine comprising the immunagen useful for preventing and treating infectious diseases Him malaria and chomic disease e.g. camer, comprises poptide and carrier from protein to it influentees.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 100.0%; Seath Mer DB 21, Depth 12:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      where the conjugate comprises a disufplide bridge cyclised peptide and an immunoup into carrier. The vaccines can be used in the treatment of all express. The present sequence is a peptide immunogen derived from imman immunoglobulin 8 (198) suitable to be cyclised and used in the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention relates to conjugates suitable for use in vaccines
The present invention relates to a composition comprising allergy peptides are derived by an inert carrier. The allergy peptides are derived from immunoglobulin E (19E) or 19E receptor. The present peptide is one such peptide from 19E. The composition is useful as a vaccine or for manufacturing a medicament for the prophylaxis or treatment of allergy. In particular, for boosting an anti-allergy immune response in an individual susceptible to an allergic response.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Immun.gen; human; IgE; immunoglobulin E; allergy; thio-ether linkage;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Conjusts to take in vaccine for treatment of allergy, complises durilleds bridge cyclized peptide and imminogenic carrier.

The present tivention describes as imministed to consistants a periode of the district contrast (1b) derived for profess to the Beaughouse influenced of its fragment. Also described and the verying the expectation of the profess to or its fragment, and the profess to a secretarial of the profess to or its fragment, and the secretarial of the verying of the profess to or its fragment, and the secretarial of the very present. If the very status of the anitalism profess to neurophysical professional transition of the secretarial infections in the result of the secretarial infections there is not the secretarial infections. The secretarial infections the secretarial infections and the present sequence represents the secretarial infections and the present in the secretarial infections and the present in the secretarial infections and the present in the secretarial infections.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Jamons page and vaccine comprising the influences useful for preventing and treating infectious diseases here, ealarie and chicking disease e.g. concert, comprises peptide and native thom proteins of influences.

The present invention describes a popilde [I] comprising an isolated sufficient exposed group/epilope [BI] of C-epsilon-2 domain [D] of immunicabilin B [1987, or its minitope. Also described area [1] and immunicabilin B [1987, or its minitope. Also described area [1] of immunication [II] [50] treating allergy comprising [II], [2] a vaccine [II] of treating allergy comprising [II], [3] a vaccine [III] of treating allergy comprising [II], [3] a vaccine [III] of the present of the properties [IV] capable of the properties [IV] capable of the producing [IV], [4] and the producing [IV] of the present [IV] of the producing [IV] of the present producing [IV] of the present producing and patient susceptible to or suffering from allergies [IV] is also useful in diagnosing atopy. AAB25307 to AAB26399 represent producing [IV] is also useful in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
             igs C-spsilon-2 domain surface exposed epitope peptide P3 SEQ ID NO.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Pepticles useful for treating, preventing and ameliorating allergic diseates, comprising an isolated suiface exposed group of a specific domain from immunoglobulin E.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention relates to inkage rethindeledy for use in the conjugation of compounds (e.g. peptides) to carrier vehicles (e.g. parconolecties, polymers, dendrimers, proteins to produce biological and immunolecties, polymers, dendrimers, proteins to produce biological and immunolectical constitutions. The authority of use in a partial composition or a variable for a protein for use in a partial composition or a variable. The inventor consistence in a partial composition or a variable. The foreign control of conjugate derived from or immorphisms of the invention are useful in the minimal confidence compositions of the invention are useful in the minimal confidence in a protein so as to form an immunoration in the minimal or invention allows for controlled conjugation in the protein so as to form an immunoration in the minimal or in the minimal or a protein so as to form an immunoration.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     an immunogenic conjugate useful irretment of IdS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                               Human, linkage technology: conjugated compound, cutilet vehicle; epitope; Cepsilon2; Cepsilon3; Cepsilon4; immunoglotulin E; 198 mediated disease; antibody response

                                                                                                                                                                                                                                                       The present invention relates to a composition comprising allergy peptides linked by an inert carrier. The allergy peptides are derived from Immunoglobulin E (192) or 19E receptor. The present peptide is one such peptide from 192. The composition is useful as a vaccine or for manufacturing a medicament for the prophylaxis or treatment of allergy. In particular, for boosting an anti-ailergy immune response in an individual susceptible to an allergic response.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Immunogen, hunan, 19E, immunoglobulin E, allergy, thio-ether linkage.
Vaccine, antiallergic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
New vactine comprising allergy peptides linked by an inert carrier, useful for boosting an anti-allergy immune response in an individual susceptible to an allergic response.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            .

```
The present invention relates to chiggates suitable to take in vaccines, where the complete comprises a dissulphide ortidae cyclist justified and an immunopoinc carrier. The vaccines in the used in the transmission and allergates. The present sequence is a perfect to the control from immunopiles. The present sequence is a perfect of the control of the immunopiles of the cyclists and used in the invention.
                                                          Conjugate for use in vacaine for freatment of allowy, compiled disulfide oridge cyclized peptide and immosperio carrier

The invention provides immunoglophilin E-146, and district compilising one or more of the FrepsilonRI receptor thinding determinant stress of human torplate and binding determinant stress is the sequence shown in AAY42581. The Tidds is provided the sequence shown in AAY42581. The Tidds will be provided the the sequences shown in AAY42581. The Tidds will be sequenced to be not no polarized determinant sequences shown in AAY42582. The variances are selected from the sequences are secured from the sequences are selected from the sequences are secured from the sequences are secured from the sequences and the AAY42582 the variances are secured from the transfer and transfer and tran

The invariant IgE is used to test the branching of 198 to its receptors. The invariant relates to a bispecific antibody that binds specifically to 198 when 198 is bound to its low affinity receptor (FCEH), but does not bind to 198, when 198 is bound to its high affinity receptor (FCEH). The bispecific antibody comprises an igE-binding arm with human framework residues of a recipient human antibody and donor mutine CDR (complementarity determining region) residues, but with at least one human CDR residue replacing the analogous ruther residue. The antibody also comprises an FV that is specific for a predetermined antiquen other than 198. The antibodies work by displacing bound 198 from its receptor, or via competitive inhibition of its binding. The bispecific antibodies are used for diagnosis, treatment and

The antibody as computies an PV that is specific for a predetermined antibody where, our is the antibodies work by displacing bound type from the properties. The antibodies work by displacing bound type from its properties or the competitive inhibition of its binding. The risplacing antibodies are used for diagnosis, treatment and prevention of its properties and there is mediated diseases, also, when immobilised for the collation of file from cells (for research or therapy). The highestific filth of the invention do not cause granulation or release of historical informing the invention do
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This sequence represents a fragment for arms and sequence encoding a management behavior of the management of the fragment of the sequence of the entire of

The method involves loading antigen presenting cells (APCS) having class integrated involves loading antigen presenting cells (APCS) having class and curroring the CDA. T cells with the APCS to activate precursor CDA. The is specific to the T cell epitopes. The invention is useful for the T cell epitopes. The invention is useful for the T cell epitopes. The invention is useful for the T cell epitopes. The invention is useful for them as a future captures dishase including relemantoid arthritis, postiasis, usually is a future to dishase including relemantoid arthritis, boxis and is a future contributed that is and including the selection and/or allergic disease such as food allergy, hay fever, allergic captume and venom allergy. The invention is also useful in cell therapy. The present sequence is human immunoglobulin E (IgE) HLA-AZ peptide
                                                                                                                                                                                                                                                                                                                     Optotickic Tlymphocyte; CTL; tumout; antigen presenting cell; allergy; cupus; autoimmune disease; rheumatoid arthritis; autoimmune nephritis; psoriasis; APC; multiple sclerosis; autoimmune thyroiditis; hay fever; inflammatory Dowel disease; insulin dependent diabetes; cell therapy; crohn's disease; allergic thintis; graft versus host disease; asthmattransplant rejection; human; immunoglobulin E; 1gE.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
